Virtual Classroom

The objective of this project is to give students and teachers a smooth and friendly environment similar to the offline classroom. This system will allow the teacher and students to come together on the same platform and conduct the lectures, share the lecture notes and material related to the subject.

Virtual classrooms enable teachers to create an online Classroom area where they can manage/share the documents, assignments, and other details with the students. It provides a teacher/student-friendly way to interact with each other. The teacher can create the classroom and add students to it. The system maintains one folder on google drive for each classroom. All the documents related to the classroom are stored in the respective folder. The system also provides a better way to organize lectures and assignments.
